

# KENAY

K U S T O M S

## Installation guide for;

NP-GU123-LP/LPP/LP-2/LPP-2, NP-GU123-GM/GM3, NP-GU123-UHF(all variants), NP-GU123-CUSTOM

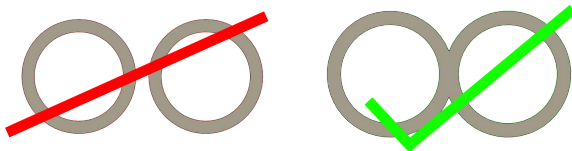

- 1 Remove 2 screws (1 either side of console)
- 2 Remove the ash tray and screw underneath.
- 3 Remove gearstick and transfer case knobs (only transfer case in automatic, just put in 1<sup>st</sup> gear).
- 4 Remove whole console and release any wiring connectors/switches
- 5 Remove 2 screws holding factory panel in place

**Re-fit NP-GU123-LWP**

From this point it's a reversal of the above instructions.

### Notes;

- Some earlier models have a smaller Cig socket. It will be loose. You will need to use a glue like 2 part epoxy to hold it in.
- Aftermarket 28mm accessories like dual USB/Voltmetre/12v sockets will not fit in side-by-side configuration, you will need to square off their mounting rings by 2mm

@KENAYKUSTOMS

The team at Kenay Kustoms thank you for your purchase :)

Please share some pics with us when you have it all installed!
